General Description

The GS3166 is low on-resistance (4.0Ω), fast single-pole single-throw (SPST) CMOS switch with operation range +1.8V ~ +5.5V. The GS3166 is designed for low operating voltage, high current switching of signal gating, chopping, modulation or demodulation (modem), and speaker output for cell phone applications.

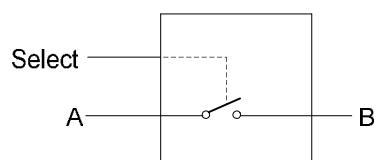

The control input, Select, tolerates input drive signals up to 5.5V, independent of supply voltage.

All devices are specified for the temperature range of -40°C to +125°C. The GS3166 single is available in Green SOT23-5 and SC70-5 packages.

Applications

- Battery-Operated Equipment
- Wearable Devices
- Computer Peripherals
- Portable Systems
- Cell Phones
- PDAs
